Manage, Secure, and Optimize Enterprise AI with Grigo

Overview

Managing multiple AI tools (like GPT, Claude, and Gemini) often spirals into juggling APIs, pricing, and scattered data.

Grigo solves this by serving as a secure, centralized platform for LLM management — offering no-code assistant creation, data protection, governance, and cost control. It ensures smooth AI operations across teams, even during outages, empowering enterprises to scale AI securely and efficiently.

Key Features

Multi-LLM Configuration

Configure multiple LLM providers like OpenAI, Anthropic, or Google to balance performance, flexibility, and cost. Easily switch between models for diverse AI use cases.

PII Protection & Custom Regex

Automatically detect and mask sensitive data like names, emails, and IDs before sending it to AI models. Ensure user privacy and compliance with regulations like GDPR and HIPAA.

Public and Private Assistants

Create or reuse customizable AI Assistants with defined roles, tone, and capabilities. Connect them to your data for consistent, accurate, and purpose-driven responses.

Chat Feature (Web Search, Docs, History)

Engage with AI models through an interactive chat that supports model selection, real-time web search, document uploads, and conversation history tracking.

AI Gateway

Enable IT teams to securely manage enterprise AI usage with visibility, cost tracking, and governance. Enforce security and compliance policies organization-wide.

Dashboard

Gain a real-time view of AI activity with stats, usage insights, and recent queries. Track consumption, spot trends, and ensure compliance from one central interface.
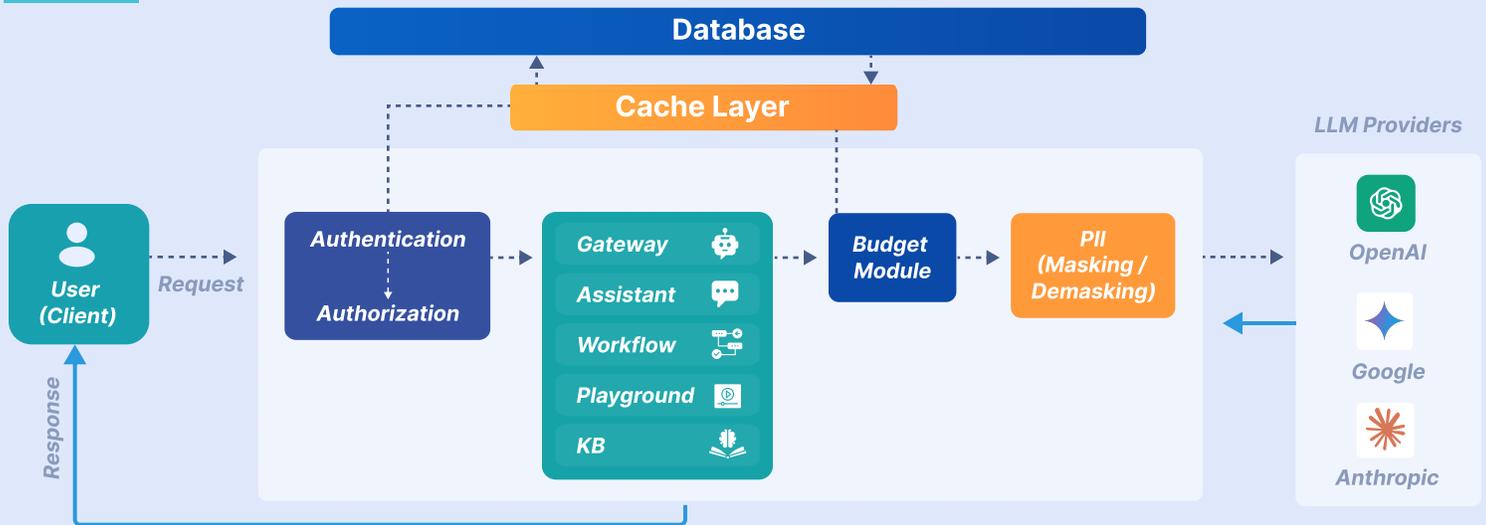

Playground for Prompt Testing

Experiment safely with multiple LLMs, compare outputs, and refine prompts. Adjust Temperature for creativity or accuracy, and set max Tokens to control response length.

Knowledge Base (with RAG)

Centralize documents and FAQs to ground AI responses in verified data using Retrieval-Augmented Generation (RAG). Get accurate, context-aware, and up-to-date answers every time.
